PROFESSIONAL SUMMARY

CS graduate and self-driven builder passionate about AI-powered content, automation, and research. Since 2021 I have been building personal AI projects — from a voice assistant to a fully automated content platform — learning by doing, shipping real products, and staying ahead of fast-moving AI tools. I want to work under a founder who moves fast, help with AI workflows, content research, and tool automation, and contribute wherever I can add real value.

CORE SKILLS

AI Tools & Automation: n8n, LLM API, Make (Integromat), Zapier, RAG Pipelines, Prompt Engineering, Workflow Automation

Content Creation & Management: AI Blog Generation, SEO Optimisation, Content Scheduling, Auto-publishing, Cross-platform Distribution

Research & Data Collection: Web Research, Prospect Enrichment, Competitive Analysis, Data Scraping, Performance Tracking

Social Media Support: Scheduling Automation (n8n, Zapier), Engagement Monitoring, LinkedIn, Instagram, Twitter/X

Web Development: React.js, Next.js, JavaScript, Python, HTML5, CSS3, REST APIs, SQL, MongoDB

Task & Ops Management: Repetitive Task Automation, CRM Workflows, Google Docs API, Notion, GitHub

KEY PROJECTS

Mr Glob – AI Content Management Platform ★ *(Python · LLM · React · SQL · n8n)*

- Built a full-stack AI content management platform that auto-generates SEO-optimised blog posts using GPT-4 — topic research, draft generation, editing, and scheduling fully automated.
- Implemented a social auto-publisher that cross-posts generated content to LinkedIn, Instagram, and Twitter/X simultaneously — zero manual effort after setup.
- Built a performance dashboard tracking views, engagement, and keyword rankings across all published posts in real time.
- Designed the entire content pipeline end-to-end: keyword input → AI draft → auto-edit → schedule → publish → track. One person operating what usually takes a full content team.

Ayra – AI Voice Assistant ★ *(Python · React · RAG · SQLite · HTML/CSS)*

Personal project built during B.E. studies | 2021 – 2025

- Started building Ayra in my first year of engineering (2021) as a personal voice assistant — grew it over 4 years into a fully functional real-time AI voice call agent.
- Integrated Retrieval-Augmented Generation (RAG) so Ayra can answer questions from custom knowledge bases — not just generic LLM responses.
- Built the full stack: Python backend for voice processing and RAG, React frontend with real-time responsiveness, SQLite for conversation memory.
- This was a self-driven, self-funded student project built alongside a full college curriculum — reflects genuine curiosity and initiative, not just coursework.

AI Research & Briefing Agent *(Python · GPT-4 · Serper API · n8n · Notion)*

- Built an automated research agent that takes a topic, runs multi-source web searches, clusters results by relevance, and generates a structured research brief — delivered to Notion automatically.
- Used by me personally to research topics, summarise long-form content, and extract key data points in minutes instead of hours.

- Designed to support content creators and founders who need fast, reliable research without a dedicated research team.

AI Content Repurposing Pipeline (*n8n · YouTube API · Twitter API · LinkedIn API*)

- Built a pipeline that takes a long-form YouTube video or podcast, auto-transcribes it, extracts key insights using GPT-4, and generates platform-ready posts for LinkedIn, Twitter/X, and Instagram — all in one flow.
- Output includes short-form hooks, carousels outlines, quote cards copy, and thread scripts — formatted per platform's best practices.
- This directly solves the problem every content team faces: one video, five platforms, not enough hands.

Personal AI Task & Ops Automator (*n8n · Google Sheets · Telegram · Notion*)

- Built a personal automation system that routes incoming tasks (from Telegram, email, or Notion) through GPT-4 for classification, priority-scoring, and auto-assignment to the right workflow.
- Handles repetitive daily ops: data entry from forms → Google Sheets, meeting notes → Notion summaries, social comments → sentiment-tagged CRM entries.
- Goal was to automate everything a junior assistant would do — so I could focus on higher-value work. It works.

Lead Generation Engine (*n8n · CRM · LinkedIn API*)

- Architected an automated lead generation pipeline that scrapes prospects, enriches profiles, and triggers personalised multi-channel outreach via LinkedIn.
- Integrated CRM to track lead status, follow-up sequences, and conversion analytics end-to-end.

PROFESSIONAL EXPERIENCE

AI Automation & Web Developer — Ginger Media Group, Bengaluru

Sep 2025 – May 2026

- Built AI-powered marketing automation workflows and content publishing pipelines using GPT-4, n8n, and Brevo.
- Designed and deployed social media automation flows for post scheduling, publishing, and engagement monitoring across LinkedIn, Instagram, and Twitter/X.
- Managed CRM integration for full-funnel tracking and real-time campaign analytics.
- Designed and improved UI/UX of company websites using Next.js and React.js.

Web Development Intern & AI Integration - Rooman Technologies, Bengaluru

Oct 2024 – Mar 2025

- Developed responsive landing pages and marketing microsites optimised for SEO and fast load times.
- Integrated third-party APIs, analytics scripts, and tracking pixels into production environments.
- Assisted in deploying AI tools and APIs; handled CI/CD and deployment workflows.

EDUCATION

B.E. in Computer Science - City Engineering College, Bengaluru

CGPA: 8.0 / 10 | Department Rank: 1st | Quiz Competition: 1st Place (2× consecutive years)

Graduated: Aug 2025

CERTIFICATIONS & ACHIEVEMENTS

- Web Development Bootcamp – Udemy (HTML, CSS, JavaScript ES6+, React, Node.js)
- Python Full-Stack Course – built and deployed a real-world full-stack application.
- First Place – Quiz Competition, City Engineering College (2× consecutive years).
- Department Rank 1 – B.E. Computer Science, City Engineering College.

STRENGTHS

- Self-starter who builds things — every project listed above is a real, deployed product, not a tutorial follow-along.
- Fast learner with a builder's mindset; shipped Ayra across 4 years of college purely out of curiosity and drive.
- Understands the content + AI intersection deeply — can think like a content ops person and execute like an engineer.
- Low-maintenance, high-output; comfortable handling ambiguous tasks independently and iterating fast.
